

Navbar

The navbar is fully contained by an HTML5 Nav tag. Inside a recommended container div, there are 2 main parts of the navbar. A logo or brand link, and the navigations links. You can align these links to the left or right.

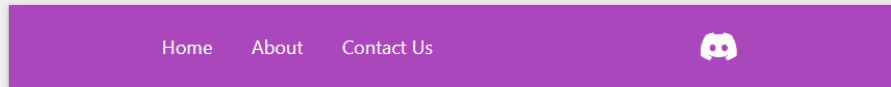

Right Aligned Links

To right align your navbar links, just add a right class to your `` that contains them.

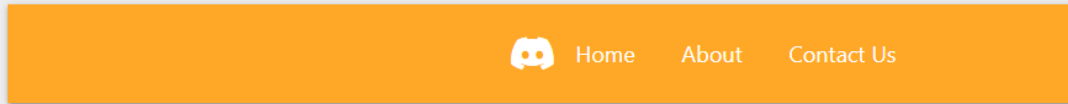

Left aligned aligned to your class

To left align your navbar links, just add a left class to your `<u>` that contains them.

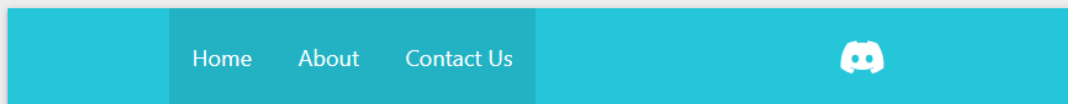

Centering the logo

The logo will center itself on medium and down screens, but if you want the logo to always be centered, add the center class to your ``. You will have to make sure yourself that links do not overlap if you use this.

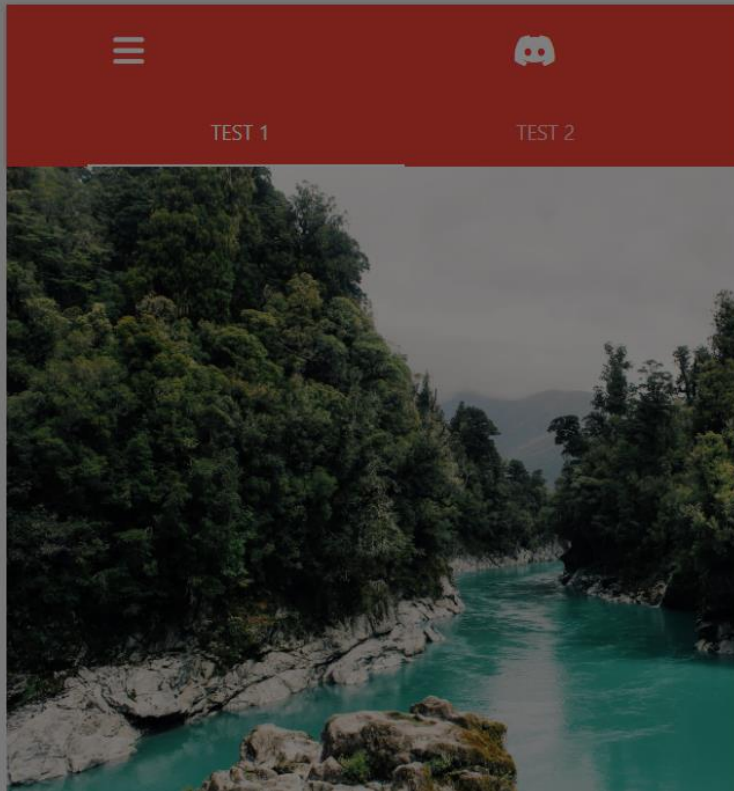

Active Items

Add active class to your li tags to denote the current page.

Extended Navbar with Tabs

To add extended components to the navbar, add the class nav-extended to the outer container. Then you can just include a tabs component inside the nav-wrapper.

Extended Navbar with Tabs

To add extended components to the navbar, add the class `nav-extended` to the outer nav tag. This will allow your navbar height to be variable. Then you can just include a tabs component inside the nav-wrapper.

Extended Navbar with Tabs

To add extended components to the navbar, add the class `nav-extended` to the outer nav tag. This will allow your navbar height to be variable. Then you can just include a `tabs` component inside the `nav-wrapper`.
